## Nye Lubeletter - August 2013

August 9, 2013

### Industry Focus

#### High-Quality Synthetic Lubricants Increase Performance in Textile Industry

[http://stuff/contentmgr/files/0/b54721caa1260db4485ee56b2dd7c780/en/lubenote\\_textile.pdf](http://stuff/contentmgr/files/0/b54721caa1260db4485ee56b2dd7c780/en/lubenote_textile.pdf)

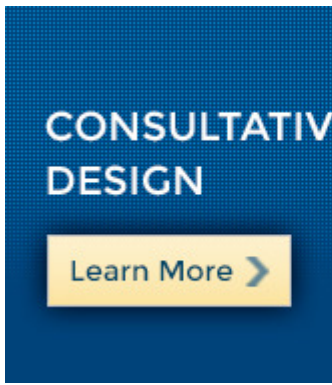

Nye has a new webpage displaying our line of lubricants for the Textile industry. They can offer productivity advantages throughout all of the many conversion and specialty processes. These processes range from machinery used in opening, carding, drawing, and yarn spinning of natural and synthetic staple fiber, to melt spinning, winding, and texturizing of continuous filament yarn, thread, and high tenacity tire cord.

### Quality

#### Nye's Commitment to the Highest Quality Standards

Over the past couple of years, Nye has initiated a six sigma based quality program as part of our ongoing drive to further continuous improvement of overall product and process quality. We have initiated several additional in-house metrics to facilitate tracking of our progress. We are pleased to note that our internal metrics clearly indicate an overall improvement, across all segments of our operations, as a direct result of this six-sigma based quality program. We are excited to relay this to all of our valued customers, as assurance that Nye continues in its ongoing efforts to ensure consistent product quality and reliability across all markets and applications served.
